

Bio: Karina joined Nature Communications in September 2021. After studying biochemistry and neuroscience she received her PhD from the Charité University of Medicine and carried out postdoctoral work at the Max Delbrück Center for Molecular Medicine in Berlin. Her research focused on preclinical models of neuroimmune conditions and on the particular role of microglia and nerve-associated macrophages in physiology and disease. Karina is based in the Berlin office and handles preclinical and clinical research submissions on bone, lung, skin and muscle physiology and disease, gene therapy and toxicology.
